CONTENT REPURPOSING PLAYBOOK

Whitepaper to 12 Social Assets: The Matrix

Stop writing 10 separate posts from scratch. Here is how growth teams systematically extract high-density social assets from single technical source documents.

WHAT THIS FRAMEWORK DELIVERS:

- 1 single technical whitepaper generates 12 platform-native assets
- 100% factual fidelity: every claim is linked to an exact source citation
- Deterministic schemas prevent tone drift and generative hallucinations
- Strict platform adaptation preserves native algorithmic reach

THE CONTENT BOTTLENECK

The Manual Repurposing Trap

Why traditional social content production breaks down at technical SaaS companies:

1. Manual Rewrite Fatigue

Engineers spend hours explaining features to marketers, who spend days rewording technical documentation into generic social updates.

2. Context Dilution

Simplifying complex architectural concepts often removes the exact technical nuances that make senior developers and technical founders trust your product.

3. Format Laziness

Copy-pasting identical text across LinkedIn, X, and YouTube ignores native platform algorithms and engagement mechanics.

STEP 1: FACT EXTRACTION

Deterministic Source Ingestion

Before generating a single headline, parse the source document into structured evidence:

1. Structural Parsing

Deconstruct the technical document into semantic units: titled sections, architectural lists, and quantitative benchmark tables.

2. Metric Boundary Detection

Flag benchmark percentages, latency thresholds (< 15ms), and throughput numbers with explicit verification requirements.

3. Verbatim Evidence Binding

Store exact sentences as EvidenceReference models so every generated claim can be audited against the original source text.

STEP 2: PLATFORM MATRIX

The 12-Asset Multi-Channel Matrix

How a single technical source document maps into 12 native asset formats:

LINKEDIN & X ASSETS

- LinkedIn Text Post: Deep-dive framework teardown (1,200 - 1,800 chars)
- LinkedIn Carousel: 5-to-6 slide high-contrast PDF architecture guide
- LinkedIn Video: 50s executive briefing with product walkthrough
- X / Twitter Thread: 3-tweet metric takeaway thread (<= 280 chars/tweet)
- X / Twitter Graphic: 1200x675 px dark-mode system diagram

VIDEO & COMMUNITY ASSETS

- YouTube Shorts: 45s rapid architectural teardown with code overlays
- Instagram Carousel: 5-slide visual tactical workflow guide
- Developer Forum: Technical discussion post with benchmark code

STEP 3: QUALITY GATES

The Pre-Publish Verification Gate

Never publish without verifying all 8 readiness criteria:

MANDATORY VERIFICATION CHECKLIST

[X] Hook Tested: Under 150 characters with clear value proposition
[X] Evidence Checked: All technical claims supported by source text citations
[X] Rights Verified: Commercial licenses confirmed for all design assets
[X] Active Tracking Link: Programmatic UTM parameters verified and resolved
[X] Rendered File Present: MP4, PDF, or PNG file verified on disk
[X] Editable Source Preserved: Markdown, SVG, or HTML available for revision

GET THE WORKFLOW

Deploy the Repurposing Matrix

Turn your technical documentation into a scalable content engine without hiring an army of writers.
